

Correlations between breast cancer and planetary configurations
By Alpee Lavoie, NCGR Level IV

Abstract

Research attempts to correlate breast cancer with longitudinal planetary positions.

Introduction

In addition to the existing data, over the past three months I have collected more timed data of women who had breast cancer. For this approach I utilized all the charts for breast cancer as a sample. Timed natal charts were utilized for those who had other types of cancer and were used as the control group. In this research extensive astrological criteria were employed.

Methodology

I checked aspects, signs, houses, declination, occultations, intercepted planets in houses, planetary phases, planetary speed, such as acceleration or slowing down in direct or retrograde, out of bound planets, planet rising before the Sun or Moon, last aspect of the Moon, and we also included an in-depth analysis of the rulers of the houses, totaling the usage of 3,780 criteria in all.

All of these criteria were then sent through our AIR software Astro-Investigator Research program which calculates and finds all important criteria with a specified chi-square and probabilities.

$$X^2 = \sum_{i=1}^n \frac{(O_i - E_i)^2}{E_i}$$
 The chi-square is calculated using (observed group minus expected frequency) squares divided by the expected frequency.

In this research the observed group were the breast cancer woman and the expected frequency was calculated from all the other cancer people (but no breast cancer).

I then chose all chi squares higher than three. There were 235 astrological criteria with a chi-square higher than three. All this 235 criteria were now sent to the neural net module for further analysis. Neural net is a mathematical tool that provides the details of the importance of each criterion. It then assigns numerical weights to each criterion in the resulting data according to their strength. The module create a model that you can use to analyze charts.

Next, I sent the breast cancer chart data through the neural net module to see how well each breast cancer chart conformed with the model. The control group data was then sent to the module to see how well it conformed. If the neural net model correlates well with the breast cancer sample data but does not correlate well with the control group data then there is no doubt that model and the weight created pertain to breast cancer only.

The results are presented in Figure 1 and 2. Figure 1 shows the correlated data of those with breast cancer while figure 2 shows the data of those with other types of cancer. As you can see by the breast cancer graph of Figure 1 all the charts show the strength of the graph to 'Yes' meaning that they conform well with the model. All the charts in Figure 2 do not even reach the strength of 'Don't Know' indicating that they do not have any of the astrological criteria contained in the file of those with breast cancer.

Shown below are some details on the specific criterion that are included in the model above. Please note that a model may include hundreds of criteria and you cannot take a single criterion and predict breast cancer with it. The following criteria are all above a chi-square of 5 and that translates to about a 97.5% probability

Ruler of the ascendant in Taurus	The ruler of the ascendant in the earth sign	The ruler of the sixth in the eighth house
Mercury & Venus speed accelerating	Jupiter retrograde slowing down	Saturn speed accelerating
The speed of Uranus slowing down	Speed of the Moon Fast about 13:45 a day	
The 4th phase of Saturn	The 8th phase of Jupiter	The 3rd phase of Venus
Mars in the 8th house	Sun in the 8th house	Venus in the 6th house
Neptune in the 6th house	Saturn in the 4th house	Sun in the 6th house
Pluto in the 6th house	Venus in the eighth house	Mercury in the eighth house
Moon out of bounds	Pluto out of bounds	
Intercepted Sun	Intercepted Neptune	Intercepted 5th & 11th
Mars in Scorpio	Mars in Pisces	Mars in Libra
Ascendant in Aries	Ascendant in Capricorn	Moon in Scorpio
Mercury in Taurus	Saturn in Leo	Jupiter in Pisces

Mars in Taurus	Mercury in Leo	Venus in Aquarius
Venus in Gemini	Jupiter retrograde	Neptune retrograde
Sun in Gemini	Jupiter in Pisces	Saturn in Aries
Jupiter counter parallel Uranus	Mercury counter parallel Uranus	Mercury counter parallel Saturn
Mars counter parallel Pluto	Moon parallel Mars	Sun counter parallel Jupiter
Moon parallel Saturn	Sun parallel Saturn	
Jupiter oppose Uranus	Saturn square Uranus	Neptune square MC
Jupiter square ascendant	Sun squares Saturn	Sun conjunct Neptune
Saturn semi-square ascendant	Mercury and Venus conjunct MC	Pluto rising before the moon
Sun conjunct Mars	Moon conjunct ascendant	Sun conjunct Uranus
Mercury rising before the sun		

The following criteria seldom happen with a chi-square over 7

Ruler of the ascendant retrograde	Ruler of the eighth and the second intercepted	Ruler of the ascendant in cancer
Mars out off bounds	Sun in earth sign	Mars in Aquarius
Mars in Gemini	Moon in Capricorn	Ascendant in Libra
Venus oppose Uranus	Sun squares Saturn	Sun square Pluto
Mercury square Saturn	Jupiter conjunct ascendant	Mercury oppose Uranus
Jupiter conjunct Saturn	Mars squares Saturn	
Ruler of the six house in the ascendant	Ruler of the six house seldom retrograde	

Here is an example to show that the neural net technique works very well in astrological research. Neural Net is a very helpful tool to process data and confirm correlations.

I sent the charts for 2,400 musicians through our research program, sent these results findings through neural net and let it create a model for musicians. I tested the musician model with two musician that was not use in my sample .

Person	music315		
	+2/-0		
Franco Toronto	Not	Don't Know	Yes
Peter Standdart	Not	Don't Know	Yes

Fig 5

Breast cancer is headline news everywhere right now. After spending hundreds of hours researching the topic I believe that astrology can predict the probability of a woman who is susceptible to breast cancer. I felt that if I could get a large enough sample I could write an article in one of the major science or medical magazines. I'm sure such an article would put astrology on the map. A few months ago I sent emails to every possible astrology group that I could find on the Internet requesting data of women who had breast cancer. All I received were 36 charts for woman with breast cancer. And 90% of these charts came from astrologers outside of the United States. In 1973 I was the force behind changing the Blue laws in Connecticut. The Blue laws read: if you do astrology, psychology, psychic predictions or any kind of predictions with or without pay you will be fined \$20,000 and serve 10 years in jail. We were able to remove the words psychology and astrology from of the Blue laws. Today psychology is accepted everywhere. What happened to astrology?
