

TESTING TECHNIQUES

From

C.C. Zain Weather Prediction Book

According to Zain:

- the wet planets are: *the Moon, Venus and Saturn*
- the stormy signs are *Scorpio and Capricorn*
- the wet signs are *Cancer, Pisces and Taurus*

ASCENDANT

Our tests showed Venus in the First House brought 1-3+ inches of rain (Chi Sq 2.3), and three or more consecutive days of rain (Chi Sq 1.9). During the winter months, Venus in the First House brought 3-12+ inches of snow (Chi Sq 16).

Saturn in the First House brought 1-3+ inches of rain.

Taurus (Chi Sq 2.5) and Capricorn (Chi Sq 10.4) on the Ascendant cusp brought 1-3+ inches of rain, with Taurus (Chi Sq 2.4) also bringing rain for three or more consecutive days.

Pisces (Chi Sq 4.4) on the cusp brought 3-12+ inches of snow during the winter months.

The Signs of the Ascendant Rulers were Taurus, Cancer, Scorpio, Capricorn and Pisces. Three or more consecutive days of rain occurred when the Rulers were in Taurus (Chi Sq 7.8) or Scorpio (Chi Sq 2.4). One-to-three or more inches of rain occurred when the Rulers were in Taurus, Cancer, Scorpio, Capricorn or Pisces (Chi Sq 2.3).

In the winter months, Rulers of the Ascendant in Scorpio (Chi Sq 26.7), Capricorn (Chi Sq 41) or Pisces (Chi Sq 14.6) brought 3-12+ inches of snow.

FOURTH HOUSE/IC

The two most notable occurrences of planets in the IC were the Moon and Saturn. When the Moon (Chi Sq 4.3) was in the Fourth House, we saw three or more consecutive days of rain. Saturn (Chi Sq 3.2) was present in the Fourth during thunderstorms.

In winter, Saturn (Chi Sq 1.5) and the Moon (Chi Sq 6.6) brought 3-12+ inches of snow.

Capricorn (Chi Sq 3.2) on the cusp of the IC brought 1-3+ inches of rain. However, three or more consecutive days of rain were seen when Taurus (Chi Sq 2.1), Scorpio or Capricorn (1.1) were on the cusp.

It is interesting to note that we found 3-12+ inches of snow when Cancer (Chi Sq 2.2) was on the cusp.

The Signs of the Rulers of the IC were Cancer, Scorpio and Capricorn. When the Ruler was in Scorpio or Capricorn (Chi Sq 4.2), we found 1-3+ inches of rain, with Cancer (Chi Sq 11.2) bringing three or more consecutive days of rain.

In winter, Scorpio (Chi Sq 17.8), Capricorn (Chi Sq 13) or Pisces (Chi Sq 44) brought 3-12+ inches of snow.

THE MOON

The Moon in Pisces had the *highest* Chi Sq at 10.6

The Dispositors of the Moon were in Taurus, Scorpio, Capricorn and Pisces. When the Dispositor was in Taurus (Chi Sq 2.1) or Scorpio (Chi Sq 4.1), there were three or more consecutive days of rain. We also found Scorpio (Chi Sq 3.2) totals of 1-3+ inches of rain

In winter, Scorpio (Chi Sq 19.1), Pisces (Chi Sq 35.8) or Capricorn (Chi Sq 5.7) brought 3-12+ inches of snow.

IN SUMMARY

Our results show that this method works when we had a lot of rain. It appears that this method can indicate this. On the other hand, there were many times that we did not have any rain at all, where this method indicated heavy rain. Also how many times did we see where we had heavy rain when it was not forecasted. So I feel that we need to go beyond his method.

The following two charts are drawings of the Quarter Moon, where there was no rain at all. Yet following Zain's method, it shows a lot of rain.
